## **DETAILED ACTION**

### ***Election/Restrictions***

1. Claims 5-7 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 07/20/2004.

### ***Examiner's Amendment***

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

3. This application is in condition for allowance except for the presence of claims 5-7 non-elected without traverse. Accordingly, claims 5-7 have been cancelled.

### ***Allowable Subject Matter***

4. Claims 1-4 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a thin film magnetic memory device with all limitations as recited in claim 1, comprising a substrate, a magnetic memory cell, a buffer layer having a first surface and a second surface opposite to the first surface, and a wire extending in one direction

Art Unit: 2818

and intersecting the magnetic memory cell, the first surface being in contact with the magnetic memory cell, the second surface having an area smaller than that of the first surface, and the wire being in contact with the second surface.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP § 707.05(a).

U.S. Patent 6,518,588 to Parkin et al. discloses a magnetic tunnel junction memory cell and a magnetic random access memory (MRAM) incorporating the cells has upper and lower cell electrodes that are formed of bi-layers that provide electrical connection between the cells and the copper word and bit lines of the MRAM.
